TECHNICAL SKILLS

Languages: Python, SQL, R, TypeScript, JavaScript, PySpark

Frontend: React, Vite, Next.js, Streamlit, Vercel

Backend & Systems: Databricks, MySQL, REST APIs, Weaviate

DevOps & Infrastructure: GitLab CI/CD, GitHub, Docker, Kubernetes

ML & AI: LangGraph, LLMs, Multi-agent systems, RAG, Scikit-Learn, PyTorch, TensorFlow, Hugging Face

RELEVANT EXPERIENCE

Data Scientist - AI Team | Xcel Energy | Denver, CO

August 2025 - Present

Work-Order Reconciliation Project (Technical Lead):

- Led development of a production-grade, multi-agent AI system (LangGraph) that automated closure decisions on incomplete work orders, translating complex finance/operations business logic into agent workflows and replacing a manual process at enterprise scale
- Designed agent-based workflows combining LLM classification, SQL-backed tool calls, and deterministic business rules to infer missing financial charges, turning finance business logic into code and structured agent actions
- Built agent evaluation and monitoring framework: confidence scoring, decision tracing, and structured logging, to validate output accuracy, enable auditability, and support continuous improvement of agent performance
- Delivered \$1B+ in projected financial impact by reclassifying spend from operating (O&M) to capital

GitLab Developer Platform Intelligence Project:

- Building a Claude-powered multi-agent system with instruction/prompt design and automated evaluation, validating configurations against evolving standards and auto-correcting non-compliant cases before merge
- System is designed for company-wide rollout, standardizing developer workflows and reducing review overhead

Propensity to Pay / Credit Campaign Projects:

- Built and deployed a production ML pipeline modeling customer financial risk and payment behavior from debt, income, and payment-history data, combining and analyzing large multi-source datasets to drive decisions
- Developed a Streamlit application that turns model outputs into an intuitive analytical interface for business users, converting predictions into actionable decisions and driving stakeholder adoption

Lead Developer | [AtlasThyroid.ai](#) | Remote

April 2026 – Present

- Optimizing a production multi-agent backend to improve inter-agent coordination and eliminate redundant LLM calls, reducing latency and inference cost
- Building a RAG pipeline with vector retrieval and embeddings over a library of physician-vetted clinical articles, grounding LLM responses in cited, authoritative sources

Data Scientist Intern - AI Team | Xcel Energy | Denver, CO

May - August 2025

- Built a geospatial routing application mapping field collectors to customer disconnection sites, optimizing assignments based on location, travel time, and outstanding debt prioritization
 - Improved GitLab CI/CD pipelines for continuous integration and deployment of model updates and data pipelines
-

RELEVANT PROJECTS

AI Research Agent | [GitHub](#)

Present

- Architecting an end-to-end multimodal RAG pipeline enabling researchers to upload academic papers and supplementary materials, extracting text, images, figures, and tables to summarize and interpret scientific research
 - Building a LangGraph-based multi-agent system to handle summarization, semantic Q&A with cited sources, cross-paper comparison, and research gap identification
-

EDUCATION

Master of Science in Data Science – University of Colorado - Boulder

December 2025

Bachelor of Science in Biophysics, Minor in Mathematics – Texas Christian University

May 2024

Honors Laureate of John V. Roach Honors College
